

## Strategies

For Wednesday May 21, 2003.

Please pick an article from the book *Optimal strategies in sports* (SSH Reserves – GV706.8 .O67) and prepare a five-minute presentation about it for the class. Things you might want to mention:

- What sport?
- What is the author trying to do?
- What mathematical tools are being used?
- Are any physical principles being used?
- What did you learn from the article?

I will prepare the Keller article, so don't pick that one.
